

Process industry

Sycor: industry specialist and full-service IT provider for the process industry

As a Microsoft Gold Certified Partner and full-service IT provider, we are the ideal partner for businesses in the process industry, thanks to our comprehensive services in the Microsoft Dynamics AX environment.

As a process manufacturer, you are confronted with numerous challenges. You have to lower costs in manufacturing and the supply chain while improving your ability to deliver. You are highly networked with your suppliers, partners and customers. You are not only struggling with increasing expectations with regard to the quality of your products, you also have to track the complete movement of materials in your system – from goods receipt all the way to the end consumer. On top of this, manufacturing environments are often heterogeneous, with a combination of process manufacturing and make-to-order production, and you must comply with an ever-greater number of legal requirements. To be successful, you need stable and transparent processes, flexibility and complete control of costs. IT plays an important role here,

as more and more business processes are supported by it. The need for solution availability, performance and support is increasing.

As a full-service IT provider and Microsoft Gold Certified Partner, we are the right partner in this challenging environment, thanks to our extensive range of services in the Microsoft Dynamics AX environment. For our customers in the process industry, especially chemical and pharmaceutical companies, we optimize business processes using Process Industries, the fully integrated ERP industry solution in Microsoft Dynamics AX. We also provide the full range of services for Microsoft Dynamics AX, including consulting, development, training and multi-lingual support. Furthermore, we offer comprehensive operating services. We are DIN EN ISO 9001 certified and provide ITIL-compliant services.

Your advantages:

- Improved coordination and performance
- Lean and efficient production and logistics processes
- Lower total costs of ownership (TCO)
- Faster responses to customer requirements
- Powerful IT
- One point of contact for all IT issues

Your challenges:

- Pressure to lower costs in manufacturing and the supply chain
- Increasing quality requirements and documentation
- Heterogeneous manufacturing environments with both process manufacturing and make-to-order production
- Fast access to information
- Increasing demands placed on IT, with growing need for availability, performance and support

We have become one of Germany's biggest IT service providers in the Microsoft Dynamics AX environment through systematic staff expansions and strategic acquisitions. Thanks to numerous domestic and international projects, we have established outstanding process expertise and experience with Dynamics AX installations with anywhere from 20 to 1,100 simultaneous users. With headquarters in Göttingen, Germany, and further locations in North America and Asia, we are also extremely well positioned for international projects. >>>

Place your trust in business software that is easy to implement, flexible and tailored to your company.

Retail Chain Manager in Microsoft Dynamics AX

With Process Industries in Microsoft Dynamics AX, you benefit from an integrated business solution enhanced with industry-specific functions. As a business solution fully integrated into Microsoft Dynamics AX, Process Industries lets you continually improve your business processes across the company - both domestically and internationally.

The solution offers integrated functions that allow you to plan and control purchasing, production and distribution, manage billing and accounting and ensure legal compliance. Process Industries in Microsoft Dynamics AX supports a wide variety of production processes, including make-to-order production, make-to-stock production, mixed production or hybrid environments that incorporate individual as well as process-oriented modes. In this way, you can seamlessly integrate all your production processes.

Supports the following business processes and software functions:

- Maps and supports different production processes, e.g., make-to-order, make to stock and mixed modes
- Incorporates individual as well as process-oriented modes
- Planning of co-products and by-products
- Management of recipes and formulas
- Quality management and control
- Batch tracing and product runs
- Cost accounting for individual processes
- Supports FEFO (first expired/first out) and expiration dates
- Lot size management and multiple warehouse dimensions
- Supply chain management and customer relationship management
- Integrated controlling functions
- Freely customizable, real-time business reports

By providing extensive information in real time, Process Industries in Microsoft Dynamics AX ensures transparency, smooth processes and fast responses to customer requirements. All employees across departmental lines have access to real-time information. This significantly expedites decisions relating to purchasing, sales and production. As a result, you can implement necessary changes and corrections faster and make better, sounder decisions. At the same time, you never lose sight of your business goals.

Process Industries in Microsoft Dynamics AX offers a familiar ease of use thanks to an interface closely modeled on the design and functions of other Microsoft applications. Within no time your employees will be using the whole range of tools independently and effectively. The user interface can also be customized to accommodate individual preferences and routines, making the solution even easier to use. Your employees will work efficiently and intelligently as a result.

In addition, the value of your IT investment is safeguarded over the long term, as this integrated solution lets you use many other Microsoft product features, and Process Industries in Microsoft Dynamics AX has the flexibility and scalability to grow with your company.

Business advantages:

- Transparent view of all key performance indicators (KPIs) in real-time
- Faster, sounder decisions
- Better control of processes
