

Sycor.Manufacturing

The SAP Business All-in-One solution for the manufacturing industry.

The fully integrated SAP solution for medium-sized companies in the manufacturing industry.

As a medium-sized business in the manufacturing industry, you can map your entire value-added chain with *Sycor.Manufacturing*, our fully integrated SAP industry solution. You profit from preconfigured key processes of your industry and flexible support for your day-to-day business at the same time.

As a manufacturer of high-quality products in the manufacturing sector, you are exposed to intense competitive pressure. At the same time, increasingly complex requirements, customer-specific modifications and high expectations with regard to the quality of your products are forcing you to maintain a high level of flexibility. Close integration with the logistics processes of your business partners requires a high degree of organizational and technical expertise. The need for efficient development of customized solutions is constantly placing new demands on your business.

With *Sycor.Manufacturing*, the industry solution for the manufacturing industry, you will be perfectly equipped for these challenges and prepared for the future. As a compact

Your challenges:

- Process and planning reliability with increased productivity
- High quality standards and order transparency
- Increase delivery performance and customer satisfaction
- Minimize capital tie-up through optimal inventories
- Innovative production processes
- Rising pressure to lower costs and innovate

SAP solution for medium-sized business, *Sycor.Manufacturing* maps all your processes, from procurement and customer-specific development right through to complex supplier processes. The solution also allows you to maintain a clear overview of your business at all times thanks to freely customizable reports as well as integrated financial accounting and controlling functions. With this full-fledged ERP system, you can coordinate your logistics process across all departments and reliably plan and control your production processes.

The solution supports all the typical processes of the manufacturing industry, from metals procurement, materials planning and production planning right through to shipping and invoicing. It provides document management capabilities, classification functions, product data and change management features and allows for standard integration of CAD systems. An extensive variant configuration function for your products gives you a high level of flexibility while reducing the need for master data maintenance.

Sycor.Manufacturing offers unique features for complex production planning and control. Your day-to-day challenges include minimizing lead times and adhering to deadlines while optimizing capacity utilization, preproduction costs and the inventory situation. >>>

Your advantages:

- Excellent security of investment
- Short implementation phase
- Efficient and transparent workflows
- Flexible and scalable solution
- High-quality mission-critical KPIs
- Customized and intuitive user interface
- Practice-oriented training concepts

Place your trust in business software that is easy to implement, flexible and tailored to your company.

Sycor.Manufacturing lets you map these requirements as well as plan and control production processes.

The *Sycor.ProductionCockpit* is a central, easy-to-use tool with comprehensive functions for work schedulers and production planners. It offers characteristics-dependent sequence planning, campaign planning, capacity overviews and alert functions. The solution also features an intuitive user interface that can be customized to meet the user's needs. At a single glance, your employees can view the production status and plan campaigns as well as sequences more quickly while maintaining direct access to the customer order or the stock/requirements situation. The integrated shop floor control feature provides a central means of determining the status of current production processes. This way, your employees can quickly adjust plans as needed. Additional maintenance functions ensure high availability of your technical installations.

Sycor.Manufacturing offers practice-oriented

sales and shipping processes for smooth order processing. Comprehensive functions for cross-system exchange of data via electronic data interchange (EDI) are available. Developed by Sycor, the *Sycor.OrderCockpit* facilitates the creation of quotations, orders and invoices. A traffic light feature allows you to view the delivery status of all orders at a glance and perform a variety of actions, such as initiating deliveries or triggering invoices, without changing screens. We also offer custom solutions for mobile data entry (*Sycor.MobiDel*) that can further optimize your internal logistics processes. We can also implement custom features such as scheduling agreements with VDA-compliant (VDA = German Association of the Automotive Industry) forecast and JIT delivery schedules via EDI, packaging-based logistics and production facility integration. The SAP solution is a safe investment, can be implemented quickly and is ideal for international use. With just the press of a button, you have access to key company data as the basis for sound decisions.

Sycor is your partner for SAP implementation: We have been providing services to mid-sized manufacturers for years and have solid process expertise as well as strong references. With a staff of more than 200 in Germany, we can also advise you in any other IT-related areas, such as data center services or document management.

Supports the following business processes and software functions:

- All process steps are fully integrated and transparently mapped, including order entry, development, planning, procurement production and delivery
- The variant configuration function provides optimal support for your product range
- Product features are transparently presented via material classifications
- The quality management feature supports your manufacturing process through all phases of production
